

# ANAR Chemical Industries: India

## ENVIRONMENTAL MANAGEMENT SYSTEMS

### Overview:

#### Needs

- Integrated approach

#### Benefits

- Access to new clients
- Improvement of environmental culture within the organisation
- Supply chain management

### The Company

Anar produces dyes, pigments and other speciality chemicals to the textile, leather, printing ink and painting industries in countries such as India, USA, Germany, Italy and Mexico.

### The Issue

Anar needed a management system to integrate health, safety and environmental aspects of their operations, so as to bring about continual improvement in these areas.

### **The Benefits**

Visible benefits include:

- Reduction in Power Consumption
- Dust control measures
- Reduction of pollution load
- Reduction in water consumption.

Total cost savings are calculated at 10,92,300/- rupees

Anar's integrated management system has led to operational cost reductions that have helped the company resist market pressures and problems.

ISO 14001 has also given Anar instant access to new clients due to the credibility of ISO 14001.

The environmental culture at Anar has improved considerably through periodic training and internal & external audits.

With regard to the relationships between Anar and its suppliers, there is now a dialogue especially with suppliers of hazardous materials to ensure that relevant information is provided to Anar, and packaging requirements are followed. Moreover, they ascertain whether they have environmental control and safety measures in place at their end.

### **BSI's role**

BSI was able to give constructive and practical observations that enhanced the scope for continuous improvement opportunities.
